Contents of Volume 98

Number 1, 7 September 1982

LENARZ, M. S. and CONLEY, W., Reproductive Gambling in Bighorn Sheep (Ovis): A Simulation 1

HAO, B.-L., Two Kinds of Entrainment-beating Transitions in a Driven Limit-cycle Oscillator 9

PICTON, J. M. and STEER, M. W., A Model for the Mechanism of Tip Extension in Pollen Tubes 15

POKORNÝ, J., Multiple Frölich Coherent States in Biological Systems: Computer Simulation 21

SCHMITZ, K. S., A Model for the Association of Intercalating Ligands with Mononucleosomes and Chromatin 29

PLANT, R. E., A Continuum Model for Root Growth 45

RAO, K. M. K., Capping and Mitogenesis: A Model Implicating Microfilaments in Lymphocyte Activation 61

KLINOV, S. V. and KURGANOV, B. I., The Theoretical Analysis of Kinetic Behaviour of "Hysteretic" Allosteric Enzymes V. Relaxation Kinetics of Dissociating Enzyme Systems . . 73

KRAMER, L., Absolute Stability and Transitions in Ecosystems with a Multiplicity of Stable States and Dispersal 91

KOHN, M. C. and CHIANG, E., Metabolic Network Sensitivity Analysis 109

BLAKE, J. R., LIRON, N. and ALDIS, G. K., Flow Patterns around Ciliated Microorganisms and in Ciliated Ducts 127

MURRAY, J. D., Parameter Space for Turing Instability in Reaction Diffusion Mechanisms: A Comparison of Models . . . 143

LETTER TO THE EDITOR

MOORE, G. P. and MOORE, A. R., The Average Spacing of Restriction Enzyme Recognition Sites in DNA . . 165

Number 2, 21 September 1982

WINZOR, D. J., WARD, L. D. and NICHOL, L. W., Quantitative Considerations of an Interplay between Ligand Binding and Reversible Adsorption of a Macromolecular Solute . . 171

LOUIE, A. H. and SOMORJAI, R. L., Differential Geometry of Proteins: A Structural and Dynamical Representation of Patterns 189

CHEN, I. I. H. and PREWITT, R. L., A Mathematical Representation for Vessel Network 211

WILLIAMS, A. F., Surface Molecules and Cell Interactions . . 221

SCOTT, J. A., On the Biochemical Similarities of Ascorbic Acid and Interferon 235

CONRAD, M. and LIBERMAN, E. A., Molecular Computing as a Link between Biological and Physical Theory 239

VILA, J. and MARCHI, E., Theoretical Approach for a-Helix→ Random Coil Denaturation 253

VOIGT, A., DONATH, E. and HEINRICH, R., Free Energy of the Electrostatic Interaction of Cells with Adjacent Charged Glycoprotein Layer: A Theoretical Approach 269

WHEATLEY, D., GRISOLÍA, S. and HERNÁNDEZ-YAHO, J., Significance of the Rapid Degradation of Newly Synthesized Proteins in Mammalian Cells: A Working Hypothesis . . 283

GUNASEKARAN, N. and PANDE, L. K., Log Normal Distribution for the Intrinsic Abundance of Species from the Gompertz Model 301

STENBERG, M., ELWING, H. and NYGREN, H., Kinetics of Reaction Zone Formation with Radial Diffusion of Ligands over a Receptor-coated Surface 307

HIRSCH, H. R., Evolution of Senenscence: Natural Increase of Populations Displaying Gompertz- or Power-Law Death Rates and Constant of Age-Dependent Maternity Rates 321

KING, R. B., The Flow Topology of Chemical Reaction Networks 347

Number 3, 7 October 1982

KAWATO, M., FUJITA, K., SUZUKI, R. and WINFREE, A. T., A Three-Oscillator Model of the Human Circadian System Controlling the Core Temperature Rhythm and the Sleep-Wake Cycle . 369

CALDER, W. A., III., A Tradeoff Between Space and Time: Dimensional Constants in Mammalian Ecology . . . 393

KOCH, A. L., Multistep Kinetics: Choice of Models for the Growth of Bacteria 401

PETKOV, D. D., Enzyme Peptide Synthesis and Semisynthesis: Kinetic and Thermodynamic Aspects 419

HOEKSTRA, R. F., On the Asymmetry of Sex: Evolution of Mating Types in Isogamous Populations 427

VAN HOUTEN, J., Computer Simulation of *Paramecium* Chemokinesis Behaviour 453

MORLEY, A. A., Is Ageing the Result of Dominant and Co-dominant Mutations? 469

SMITH, S. W., A Model of Labelled-Ligand Displacement Assays Resulting in Logit-log Relationships 476

KATZ, M. J. and GRENANDER, U., Developmental Matching and the Numerical Matching Hypothesis for Neuronal Cell Death . 501

CASWELL, H., Optimal Life Histories and the Age-specific Costs of Reproduction 519

BRITTON, N. F., WRIGHT, N. A. and MURRAY, J. D., A Mathematical Model for Cell Population Kinetics in the Intestine . . 531

RAO, G. S., TYAGI, R. S. and MISHRA, R. K., Calculation of the Minimum Energy Conformation of Biomolecules Using a Global Optimization Technique. III. Conformation of Acetylcholine Using Molecular Fragments 543

Number 4, 21 October 1982

HAMEROFF, S. R. and WATT, R. C., Information Processing in Microtubules 549

VON HEIJNE, G. and SAVAGEAU, M. A., RNA Splicing: Advantages of Parallel Processing 563

NAGORCKA, B. N. and MOONEY, J. R., The Role of a Reaction-Diffusion System in the Formation of Hair Fibres . . . 575

CLARKE, C. H., Mutational and Evolutionary Analysis of an Archaebacterial Gene 609

BUSETTA, B., Improving the Residual Representation of Proteins . 621

BERNARD, C., Theoretical Aspects of Cupula Deflection in Semicircular Canal 637

QIWU, C. and LAWSON, G. J., Study on Models of Single Populations: An Expansion of the Logistic and Exponential Equations . 645

CLARKE, C. H., Influences of Bacterial DNA Base-ratios and Amino Acid Composition of the Gene Product on the Consequences of Frameshift Mutations 661

LETTER TO THE EDITOR

MANNING, J. T., Hitch-hiking and a Short-term Advantage for Sex 703

ERRATUM 707

Index to Volume 98

Abundance, intrinsic, of species, log normal distribution for, from the Gompertz model, 301
Acetylcholine conformation using molecular fragments; calculation of the minimum energy conformation of biomolecules using a global optimization technique, 543
Adsorption, reversible, of a macromolecular solute, quantitative considerations of an interplay between ligand binding and, 171
Ageing, is it the result of dominant and co-dominant mutations?, 469
Age-specific costs of reproduction, optimal life histories and, 519
ALDIS, G. K. (see BLAKE, J. R.), 127
Allometric equations and exponential growth, 675
Allosteric enzymes, "hysteretic"; the theoretical analysis of kinetic behaviour of; relaxation kinetics of dissociating enzyme systems, 73
Amino acid composition of the gene product, influence on the consequences of frameshift mutations, 661
Archaebacterial gene, mutational and evolutionary analysis of, 609
Ascorbic acid and interferon, on the biochemical similarities of, 235
Assays, labelled-ligand displacement, a model resulting in logit–log relationships, 476
Asymmetry of sex: evolution of mating types in isogamous populations, 427

Bacteria, choice of models for the growth of; multistep kinetics, 401
Bacterial DNA base-ratios and amino acid composition of the gene product, influences on the consequences of frameshift mutations, 661
BERNARD, C., Theoretical aspects of cupula deflection in semicircular canal, 637
Bighorn sheep (Ovis), reproductive gambling in; a simulation, 1
Binding, ligand, and reversible adsorption of a macromolecular solute, quantitative considerations of an interplay between, 171
Biological and physical theory, molecular computing as a link between, 239
Biological systems, multiple Frölich coherent states in; computer simulation, 21
Biomolecules, calculation of the minimum energy conformation using a global optimization technique; conformation of acetylcholine using molecular fragments, 543
BLAKE, J. R., LIRON, N. and ALDIS, G. K., Flow patterns around ciliated microorganisms and in ciliated ducts, 127
BRITTON, N. F., WRIGHT, N. A. and MURRAY, J. D., A mathematical model for cell population kinetics in the intestine, 531
BUSETTA, B., Improving the residual representation of proteins, 621

CALDER, W. A., III, A tradeoff between space and time: dimensional constants in mammalian ecology, 393
Capping and mitogenesis: a model implicating microfilaments in lymphocyte activation, 61
CASWELL, H., Optimal life histories and the age-specific costs of reproduction, 519

Cell death, neuronal, developmental matching and the numerical matching hypothesis for, 501
Cell interactions and surface molecules, 221
Cell population kinetics in the intestine, a mathematical model for, 531
Cells with adjacent charged glycoprotein layer, free energy of the electrostatic interaction of; a theoretical approach, 269
Cells, mammalian, significance of the rapid degradation of newly synthesized proteins in; a working hypothesis, 283
Chemical reaction networks, the flow topology of, 347
Chemokinesis behaviour, *Paramecium*, computer simulation of, 453
CHEN, I. I. H. and PREWITT, R. L., A mathematical representation for vessel network, 211
CHIANG, E. (see KOHN, M. C.), 109
Chromatin and nucleosomes, a model for the association of intercalating ligands with, 29
Ciliated microorganisms and ciliated ducts, flow patterns around and in, 127
Circadian system, human, controlling the core temperature rhythm and the sleep–wake cycle, a three-oscillator model of, 369
CLARKE, C. H., Influences of bacterial DNA base-ratios and amino acid composition of the gene product on the consequences of frameshift mutations, 661
CLARKE, C. H., Mutational and evolutionary analysis of an archaebacterial gene, 609
Computer simulation of *Paramecium* chemikinesis behaviour, 453
Computing, molecular, as a link between biological and physical theory, 239
Conformation, minimum energy, of biomolecules, calculation using a global optimization technique; conformation of acetylcholine using molecular fragments, 543
CONLEY (see LENARZ, M. S.), 1
CONRAD, M. and LIBERMAN, E. A., Molecular computing as a link between biological and physical theory, 239
Continuum model for root growth, 45
Core temperature rhythm and the sleep–wake cycle, a three-oscillator model of the human circadian system controlling the, 369
Costs, age-specific, of reproduction, optimal life histories and, 519
Cupula deflection in semicircular canal, theoretical aspects of, 637

Death of neuronal cells, developmental matching and the numerical matching hypothesis for, 501
Degradation, rapid, of newly synthesized proteins in mammalian cells, significance of; a working hypothesis, 283
Denaturation, α-helix$\rightarrow$random coil, theoretical approach for, 253
Developmental matching and the numerical matching hypothesis for neuronal cell death, 501
Differential geometry of proteins: a structural and dynamical representation of patterns, 189
Diffusion mechanisms, parameter space for Turing instability in; a comparison of models, 143
Diffusion, radial, of ligands over a receptor-coated surface, kinetics of reaction zone formation with, 307

Dimensional constants in mammalian ecology, a tradeoff between space and time, 393
Dispersal, absolute stability and transitions in ecosystems with a multiplicity of stable states and, 91
DNA base-ratios, bacterial, and amino acid composition of the gene product, their influences on the consequences of frameshift mutations, 661
DNA, the average spacing of restriction enzyme recognition sites in (letter), 165
Dominant and co-dominant mutations, is ageing the result of?, 469
DONATH, E. (see VOIGT, A.), 269
Driven limit-cycle oscillator, two kinds of entrainment-beating transitions in, 9
Ducts, ciliated, flow patterns around ciliated microorganisms and in, 127

Ecology, mammalian, dimensional constants in; a tradeoff between space and time, 393
Ecosystems with a multiplicity of stable states and dispersal, absolute stability and transitions in, 91
EDELSTEIN, L., The propagation of fungal colonies: a model for tissue growth, 679
Electrostatic interaction of cells with adjacent charged glycoprotein layer, free energy of; a theoretical approach, 269
ELWING, H. (see STENBERG, M.), 307
Entrainment-beating transitions in a driven limit-cycle oscillator, two kinds of, 9
Enzyme peptide synthesis and semisynthesis: kinetic and thermodynamic aspects, 419
Enzymes, allosteric, "hysteretic", the theoretical analysis of kinetic behaviour of, 73
Evolution of mating types in isogamous populations; on the asymmetry of sex, 427
Evolution of senescence: natural increase of populations displaying Gompertz- or power-law death rates and constant of age-dependent maternity rates, 321
Evolutionary and mutational analysis of an archaebacterial gene, 609
Exponential growth and allometric equations, 675
Exponential and logistic equations, expansion of; study on models of single populations, 645

Fibres, hair, the role of a reaction-diffusion system in the formation of, 575
Flow patterns around ciliated microorganisms and in ciliated ducts, 127
Flow topology of chemical reaction networks, 347
Frameshift mutations, influences of bacterial DNA base-ratios and amino acid composition of the gene product on the consequences of, 661
Free energy of the electrostatic interaction of cells with adjacent charged glycoprotein layer: a theoretical approach, 269
Frölich coherent states, multiple, in biological systems: computer simulation, 21
FUJITA, K. (see KAWATO, M.), 369
Fungal colony propagation: a model for tissue growth, 679

Gambling, reproductive, in bighorn sheep (Ovis): a simulation, 1
Gene, archaebacterial, mutational and evolutionary analysis of, 609
Gene product amino acid composition, influence on the consequences of frameshift mutations, 661
Glycoprotein layer, charged, adjacent, free energy of the electrostatic interaction of cells with; a theoretical approach, 269

Gompertz law: natural increase of populations displaying Gompertz- or power-law death rates and constant of age-dependent maternity rates; evolution of senescence, 321
Gompertz model, log normal distribution for the intrinsic abundance of species from, 301
GRENANDER, U. (see KATZ, M. J.), 501
GRISOLIA, S. (see WHEATLEY, D.), 283
Growth of bacteria, choice of models for; multistep kinetics, 401
Growth, exponential, and allometric equations, 675
Growth model for tissue; the propagation of fungal colonies, 679
Growth of roots, a continuum model for, 45
GUNASEKARAN, N. and PANDE, L. K., Log normal distribution for the intrinsic abundance of species from the Gompertz model, 301

Hair fibres, role of a reaction-diffusion system in the formation of, 575
HAMEROFF, S. R. and WATT, R. C., Information processing in microtubules, 549
HAO, B.-L., Two kinds of entrainment-beating transitions in a driven limit-cycle oscillator, 9
HEINRICH, R. (see VOIGT, A.), 269
α-Helix → random coil denaturation, theoretical approach for, 253
HERNÁNDEZ-YAGO, J. (see WHEATLEY, D.), 283
HIRSCH, H. R., Evolution of senescence: natural increase of populations displaying Gompertz- or power-law death rates and constant of age-dependent maternity rates, 321
Hitch-hiking and a short-term advantage for sex (letter), 703
HOEKSTRA, R. F., On the asymmetry of sex: evolution of mating types in isogamous populations, 427
Human circadian system controlling the core temperature rhythm and the sleep–wake cycle, a three-oscillator model of, 369
"Hysteretic" allosteric enzymes, the theoretical analysis of kinetic behaviour of; relaxation kinetics of dissociating enzyme systems, 73

Information processing in microtubules, 549
Instability, Turing, in reaction diffusion mechanisms, parameter space for; a comparison of models, 143
Intercalating ligands, a model for their association with mononucleosomes and chromatin, 29
Interferon and ascorbic acid, on the biochemical similarities of, 235
Intestine, a mathematical model for cell population kinetics in, 531
Isogamous populations, evolution of mating types in; on the asymmetry of sex, 427

KATZ, M. J. and GRENANDER, U., Developmental matching and the numerical matching hypothesis for neuronal cell death, 501
KAWATO, M., FUJITA, K., SUZUKI, R. and WINFREE, A. T., A three-oscillator model of the human circadian system controlling the core temperature rhythm and the sleep–wake cycle, 369
KESKINEN, R. (see PERKKIÖ, J.), 675
Kinetic behaviour of "hysteretic" allosteric enzymes, the theoretical analysis of; relaxation kinetics of dissociating enzyme systems, 73

Kinetic and thermodynamic aspects of enzyme peptide synthesis and semisynthesis, 419
Kinetics, cell population, in the intestine, a mathematical model for, 531
Kinetics, multistep: choice of models for the growth of bacteria, 401
Kinetics of reaction zone formation with radial diffusion of ligands over a receptor-coated surface, 307
KING, R. B., The flow topology of chemical reaction networks, 347
KLINOV, S. V. and KURGANOV, B. I., The theoretical analysis of kinetic behaviour of "hysteretic" allosteric enzymes. V. Relaxation kinetics of dissociating enzyme systems, 73

KOHN, M. C. and CHIANG, E., Metabolic network sensitivity analysis, 109
KRAMER, L., Absolute stability and transitions in ecosystems with a multiplicity of stable states and dispersal, 91
KURGANOV, B. I. (see KLINOV, S. V.), 73

Labelled-ligand displacement assays, a model resulting in logit–log relationships, 475
LAWSON, G. J. (see QIWU, C.), 645
LENARZ, M. S. and CONLEY, W., Reproductive gambling in bighorn sheep (Ovis), 1
LIBERMAN, E. A. (see CONRAD, M.), 239
Life histories, optimal, and the age-specific costs of reproduction, 519
Ligand binding and reversible adsorption of a macromolecular solute, quantitative considerations of an interplay between, 171
Ligand radial diffusion over a receptor-coated surface, kinetics of reaction zone formation with, 307
Ligands, intercalating, a model for their association with mononucleosomes and chromatin, 29
LIRON, N. (see BLAKE, J. R.), 127
Log normal distribution for the intrinsic abundance of species from the Gompertz model, 301
Logistic and exponential equations, expansion of; study on models of single populations, 645
Logit–log relationships, a model of labelled-ligand displacement assays resulting in, 476
LOUIE, A. H. and SOMORJAI, R. L., Differential geometry of proteins: a structural and dynamical representation of patterns, 189
Lymphocyte activation, a capping and mitogenesis model implicating microfilaments in, 61

Macromolecular solute, quantitative considerations of an interplay between ligand binding and reversible adsorption of, 171
Mammalian cells, significance of the rapid degradation of newly synthesized proteins in; a working hypothesis, 283
Mammalian ecology, dimensional constants in; a tradeoff between space and time, 393
MANNING, J. T., Hitch-hiking and a short-term advantage for sex (letter), 703
MARCHI, E. (see VILA, J.), 253

Matching, developmental, and the numerical matching hypothesis for neuronal cell death, 501
Maternity rates, age-dependent, natural increase of populations displaying Gompertz- or power-law death rates and constant of; evolution of senescence, 321
Mating types in isogamous populations, evolution of; on the asymmetry of sex, 427
Metabolic network sensitivity analysis, 109
Microfilaments and lymphocyte activation; capping and mitogenesis model, 61
Microorganisms, ciliated, and ciliated ducts, flow patterns around and in, 127
Microtubules, information processing in, 549
MISHRA, R. K. (see RAO, G. S.), 543
Mitogenesis and capping: a model implicating microfilaments in lymphocyte activation, 61
Molecular computing as a link between biological and physical theory, 239
Molecules, surface, and cell interactions, 221
Mononucleosomes and chromatin, a model for the association of intercalating ligands with, 29
MOONEY, J. R. (see NAGORCKA, B. N.), 575
MOORE, A. R. (see MOORE, G. P.), 165
